

# Cordulus Farm

Rethinking weather

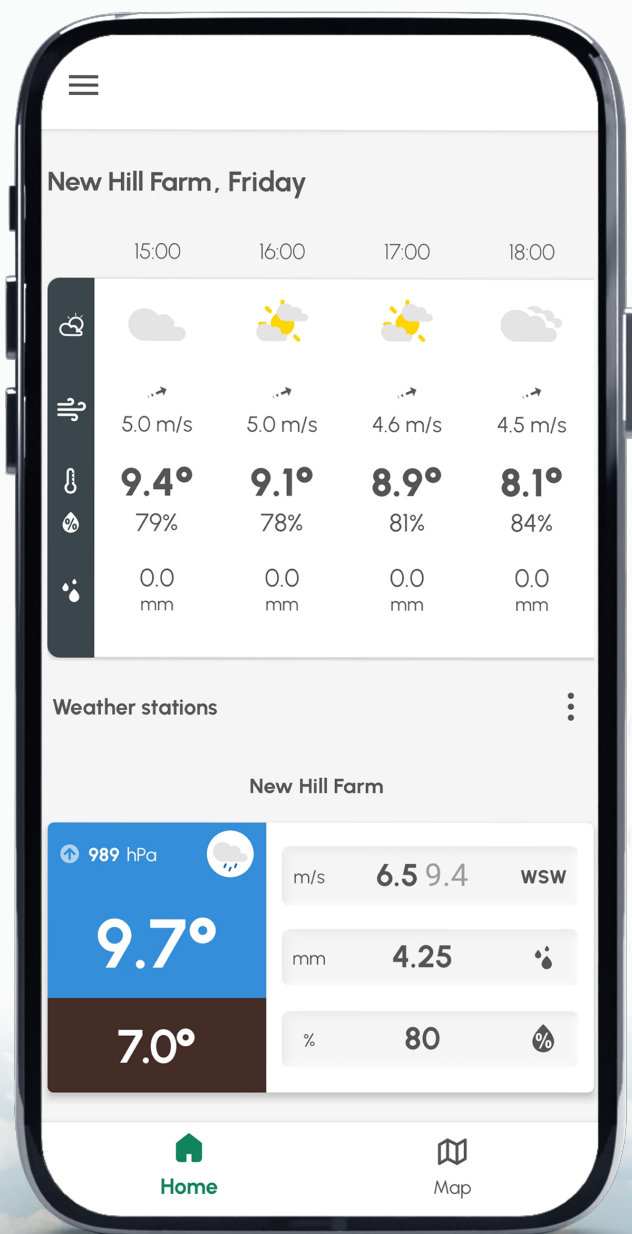

## Accurate weather data directly from your fields

Cordulus Farm Station provides you with a complete overview of the weather in your fields and makes it simple for you to make the right decisions in the right moments.

# Stay ahead of the weather

Get a complete overview of the weather on your fields. The wireless and solar-powered weather stations provide you with the possibility to measure the weather even on your farthest fields.

## Weather parameters

- Air temperature
- Wind speed
- Wind direction
- Precipitation
- Soil temperature
- Humidity
- Air pressure
- Solar radiation
- Cloud cover

## Features

- Data every 10 minutes
- Local weather forecasts
- Spray assistance
- Pest warnings
- Septoria analysis
- Historical data
- Unlimited number of users
- Access to 5 weather stations in the network per subscribed weather station.

# Weather data from your fields at your fingertips

Tailor your farming according to your local weather conditions with in-depth knowledge.

## Drill when the time is right

---

Give your seeds the optimal starting conditions for germination. Knowing the precise soil temperature will help you sow at just the right time - gone are the days of not making the most out of your growing seasons.

## Spray under optimal wind conditions

---

Track the wind speed at crop height and easily assess if the weather is suitable for spraying your crops. Avoid driving to distant fields only to discover that you can't spray because the conditions aren't optimal.

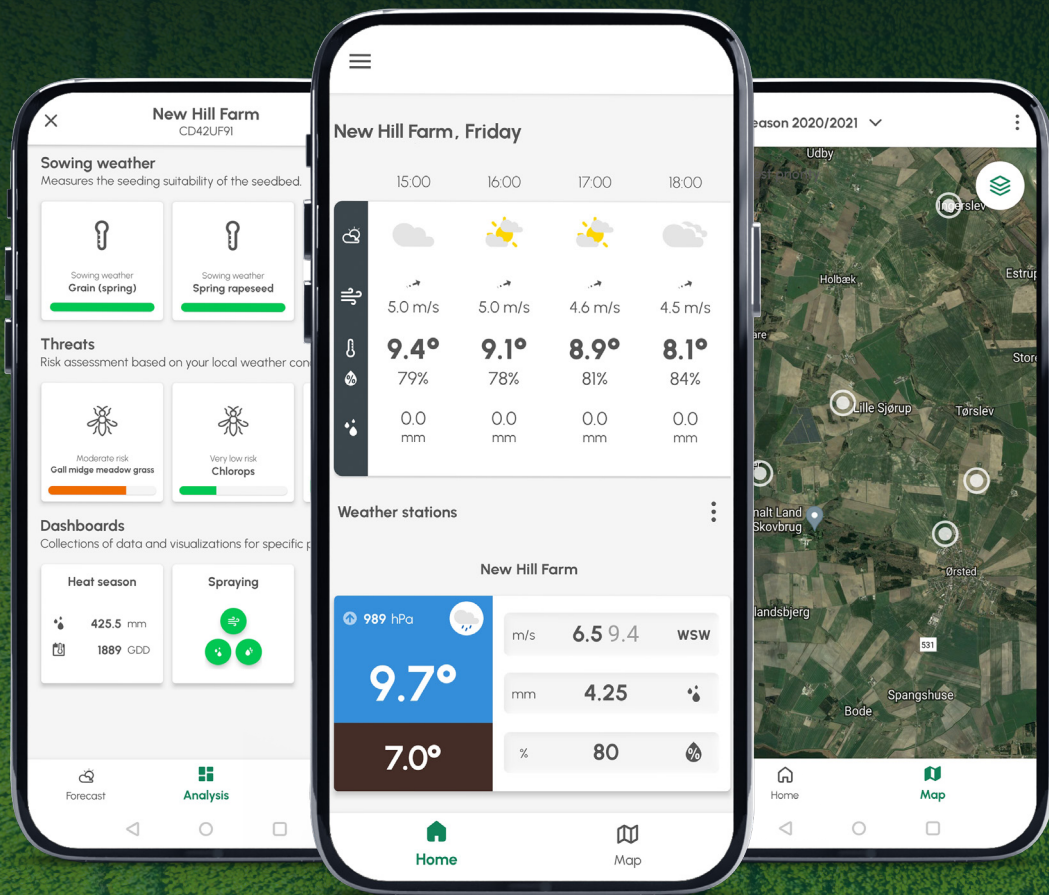

## Harvest at the right time

---

Humidity is the perfect tool to assess the moisture content of your crops in the harvest season - so time your harvests based on humidity levels! This can potentially save you costs by avoiding the need for post-harvest drying of your crops.
